AI-Driven Business Analytics and Decision Support System

This project focuses on designing and developing an AI-based business analytics system that helps organizations analyze large volumes of business data and make data-driven decisions. The system uses machine learning algorithms to identify patterns, trends, and correlations in sales, customer behavior, and operational data. It provides predictive insights such as demand forecasting, revenue trends, and performance evaluation through interactive dashboards. The AI model assists management in strategic planning, improving efficiency, reducing costs, and enhancing overall business performance.

EXPERTISE

- Data Visualization
- Data Modeling
- Real-Time Analytics
- Self-Service BI
- Report Sharing & Collaboration
- ETL processing
- Data Warehousing and Data Mining
- OLAP processing.
- Tools: Power BI ,Tableau

CODING SKILLS

- SQL
- Python
- React
- Node.js
- C++
